

*Simulation Based Tools for Regular Oversight
of Payment Systems – Case: Bank of Finland*

8th Payment and Settlement System Simulation
Seminar and Workshop
26-27 August, 2010

Tatu Laine & Tuomas Nummelin
Bank of Finland

4

network analysis financial stability
 accessibility monitoring
 quality process oriented
 aggregative combination tools investigating
 visual process flow customer focused quantitative analysis
 concept toolbox workflow best practises
 change detection automatic improvement usability
 customization possible
 standardization versatile data
 flexibility quantitative simple
 scalability qualitative analysis
 stress test simulator

Project Goal

” To identify and develop recurrent **reports** and **analysis** to serve the **oversight function** and by taking advantage of the **BoF-PSS2 simulator**”

Novelty Concepts – Toolbox

Novelty Concepts - Structure of the System

Structure Matrix

- Opening the internal structure of the system
- Showing the systemically important participants and connections.
- Usefull tool in both case with raw data and with simulation results.

- Many options to show data in this format.
- Can be used with aggregated results and with detailed data.

Novelty Concepts - Relationship Between Attributes

2D-Histogram

- Describing relationship between two variables.
- Showing the structural patterns of the system.
- Pointing out interesting variable combinations

- The chosen bins define the values of the variables which will be considered as equal.
- The results can be show as in counts, frequencies or as a sum of a value of the transactions fall in the bin.

Novelty Concepts – Evolution in Time or Simulation Scenarios

Histogram Evolution

- Describing evolution of the distributions of the certain variables over the time for example.
- Could incorporate automated 'change' detection.

- The automatic change detection is based on the ideas of the statistical process control.
- Expands the comparison of aggregated indicators to the comparison of distributions.

Novelty Concepts – Hypothetical Cases

What-If-Scenarios

- Standardized and parameterized alternative scenarios.
- Automated scenario creation for Bof-PSS2 simulator i.e. modifying the input data to represent the what-if-scenario.

- Modifies the input data based on standardised scenarios and sets up simulation parameters for the simulator.

Screener

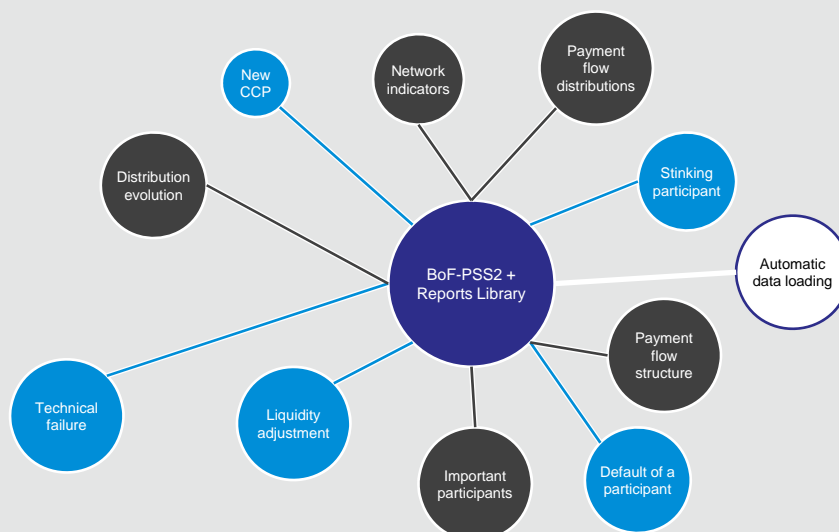

- Samples the individual what-if-scenarios.
- Draws results from larger pool of possible what-if-scenarios.
