

Monetary Policy at a Crossroads

CEF 2022 Policy Panel sponsored by the Federal Reserve Bank of Dallas

18 June 2022

Governor Olli Rehn
Bank of Finland

Eurozone economy was recovering well, but the war in Ukraine is eroding growth

Euro area GDP forecasts during the Covid-19 pandemic

Inflation dynamics – a driver and an anchor

- Driver: rapid energy inflation
- Anchor: moderate wage inflation – until recently
- Monetary policy not very effective in containing energy prices
- Inflation expectations and the psychology of inflation
 - Will the anchor hold going forward?

Inflation on the rise in the eurozone – energy inflation explains half of the total

NB: Annual inflation rate of 2015 is distorted due to the change in methodology.

Sources: Eurostat and ECB.

32426@Comp_empl_Big4(EKP)_EN

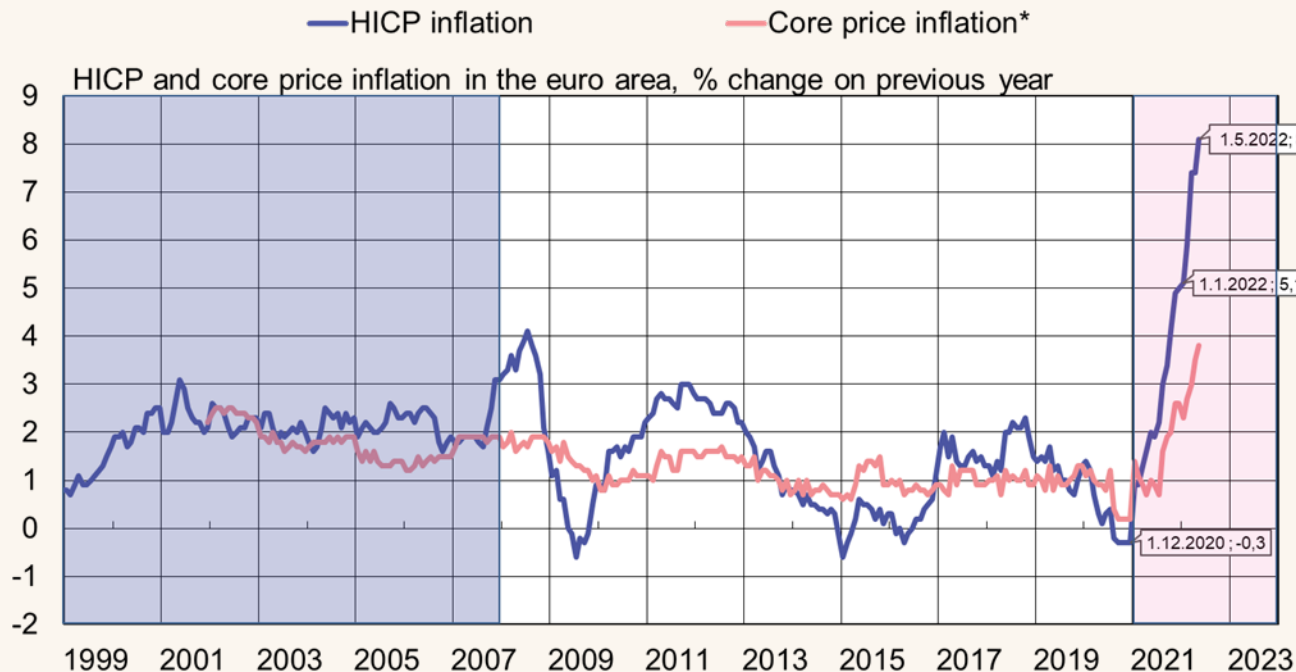

- Energy inflation and supply chain bottlenecks alone will not lead to a long-lasting (“permanent-ish”) rise in inflation...
- ... unless they cause significant, sustained second-round effects and a wage-price spiral
- In contrast to the US, wage inflation has been moderate in the euro area – at least until recently

ECB's current monetary policy strategy: a symmetric 2% inflation target

- Previous inflation target of “below but close to 2%” was often interpreted as an upper limit.
- **ECB's current target is symmetric 2% inflation over the medium term.**
- Negative and positive deviations from this target are considered equally undesirable.
- Strategy allows transitory periods in which inflation is above the 2% target.
- Strategy also improves possibilities to pursue sustainable growth and full employment without prejudice to price stability objective.

Dramatic shift in operational environment – inflation surge

NB: Annual inflation rate of 2015 is distorted due to the change in methodology.

* HICP excl. energy, food, alcohol and tobacco.

32426@YKHI(ENG)

- 1999-2007: inflation stable but slightly above target
- 2008-2020: inflation volatile but low
- 2021- : rapidly rising inflation
- Russia's invasion of Ukraine on Feb 24 further accelerated inflation
- Energy price shock exceptionally large

Monetary policy at a crossroads

- Sharp acceleration of inflation vs. deceleration of growth
- Need to curb inflation expectations to avoid wage-price spiral
- Gradual normalization of ECB monetary policy will be continued as announced on June 9th
- New strategy served us well under changed circumstances
- The ECB Governing Council is ready to use all its instruments to stabilize inflation at its 2% target over the medium term

A blue-tinted photograph of the Finnish Bank building. The building is a grand, classical-style structure with multiple stories, arched windows, and ornate architectural details. In the foreground, there are several ornate street lamps and a lion sculpture. The text 'Thank you!' is overlaid in white in the center of the image.

Thank you!
